

Getting started with your site

Everything on the site is content in this repository, in *.val.ts files.

Run the site with 'pnpm dev' and open /val to edit it in Val Studio.

Change how it looks

Open the theme in the Studio: pick a preset, then override colours, fonts, button shape and spacing. /styleguide shows every component.

Add a page

Pages are built from sections: hero, cards, image and text, carousel, accordion. Add, reorder and remove them in the Studio.

This PDF is a sample file in the files library (src/media/files.val.ts).
